

# Fine Particle Fertiliser

Ultimate nutrient delivery

Taking even and accurate application of nutrients to the maximum, fine particle fertiliser has been proven for over 30 years by dairy, sheep, beef, deer, cropping, viticulture, and horticulture farmers.

An ideal macro, mineral and biological application for any farm type. Fine particles of fertiliser ensure even plant uptake through the soil leading to improved dry matter quantity and quality.

Applied by; Groundspread, tow 'n' fert, aerial.

**“The most efficient method of fertiliser and trace element application in New Zealand.”**

- Dr Gordon Rajendram, soil scientist.

## Key benefits:

- Customized mixes based on comprehensive soil testing
- Accurate and even distribution of nutrients
- Faster response with particles already broken down
- High calcium and non acidic
- Macro, trace elements, bio-stimulants and seed in one application
- Environmentally advanced with less potential leaching and runoff
- Ideal for traditional, regenerative and biology farming systems, dairy, sheep, beef, deer, arable, horticulture.
