

MainCalci from Mainfert

Phosphate, Sulphur & Lime

Mainfert prides itself on focusing on the client, the farming system, the soil and the long term. We like to think of ourselves as providing solutions to a whole range of challenges facing today's primary producers. There is no "silver bullet" product out there – just good innovative advice based on research and experience.

We help farmers to achieve their financial and environmental goals through their biggest asset, their soil. We have a no nonsense range of fertilisers, offering value for investment and proven results.

Mainfert, in conjunction with selected local Lime Works, are pleased to offer an affordable product line ideal for topdressing of pasture on both flat and hill country.

The product is a combination of MainPhos 18, Elemental Sulphur and Aglime. Other elements can easily be added as required to the base mix eg. salt, potassium and trace minerals.

The phosphate and sulphur are sustained release, ideal for pasture maintenance with added benefit of calcium. Product is pH neutral with high phosphate availability.

| MainCalci P | P | S | Ca | SUGGESTED SPREAD RATE |
|------------------|----|----|----|-----------------------|
| 6kg P per 250kg | 6 | 14 | 73 | 250kg/ha |
| MainCalci XP | P | S | Ca | SUGGESTED SPREAD RATE |
| 10kg P per 250kg | 10 | 14 | 70 | 250kg/ha |

The Result

Our fertiliser systems are designed to apply the appropriate nutrients required and at the same time encourage a healthier soil environment. Our aim is to promote better soil structure, deeper rooting pasture and

increased biological activity, which all gives economically increased returns from the fertiliser budget. The above ground results are simply a consequence of getting the below ground system working like it should.
